

Blog Posts and Papers on Edge AI

Here's a quick summary of some of the blog posts and papers I've published during the latter half of 2025, typically as part of highlighting the capabilities, use cases, and benefits of [Open Edge Platform](#) from Intel.

The platform delivers a modular, composable stack of open-source software optimized to rapidly deploy, secure, and scale AI solutions at distributed edge sites. Open Edge Platform comprises [Edge Microvisor Toolkit](#), [Edge Manageability Framework](#), [Edge AI Libraries](#), and [Edge AI Suites](#).

In addition, the [OS Image Composer](#) tool lets you rapidly create and easily manage custom Linux images to meet your organizations' exacting requirements for edge AI workloads. The tool gives you a standardized, extensible framework for composing operating system images from pre-built artifacts of any Linux distribution that supports Debian or RPM packages. See my recent blog post on Medium: [Composing Custom Linux Images with the Inaugural Release of OS Image Composer](#).

Here are links to my recent blog posts and papers:

- A [Medium Blog Post](#) on evaluating security capabilities for edge AI.
- A GitHub Discussions blog post titled [Validating the Performance of Edge AI Workloads on Intel Processors with Edge Microvisor Toolkit](#) on running easy-to-benchmark sample applications for smart traffic intersections and wind turbine predictive maintenance on Edge Microvisor Toolkit to showcase the power and performance of running edge AI workloads on Intel processors.
- A short [blog post](#) on where to download the various versions of Edge Microvisor Toolkit.
- Deploying Edge Microvisor Toolkit with Edge Manageability Framework to Evaluate Intel Processors for AI Workloads, a GitHub Discussions [blog post](#) on using the different versions of the toolkit to evaluate the latest Intel processor optimizations.
- The [Robotics AI Suite goes gold](#) with release 2025.2 of Edge AI Suites.
- [Ringing in release 2025.2 of Edge AI Libraries](#).
- [Ringing in Release 2025.2 of Edge Manageability Framework](#).
- A [blog post](#) to highlight the latest release of Edge Microvisor Toolkit.
- A [blog post](#) on the public availability of OS Image Composer.
- A [blog post](#) on using the real-time version of Edge Microvisor Toolkit.
- A [blog post](#) on selecting a version of Edge Microvisor Toolkit for demonstrating the capabilities of Intel platforms.
- A [blog post](#) on evaluating security capabilities for edge AI.
- An [FAQ](#) on the Purpose and Uses of Edge Microvisor Toolkit.
- A description of the [purpose and capabilities](#) of Edge Microvisor Toolkit and an [explanation](#) of the toolkit's open source release policy model.
- An evolving [list of resources](#) for participating in or [contributing to Open Edge Platform](#).
- A GitHub Discussions [blog post](#) that includes a concise section on how to download, install, and try out the OS Image Composer tool.
- A [white paper](#) titled Composing and Managing Custom OS Images for Performance, Scalability, and Security at the Edge that describes the vision, capabilities, and business benefits of the OS Image Composer tool.
- An end-of-the-year [LinkedIn post](#) on various recent publications.
- Blog post on Medium: [Composing Custom Linux Images with the Inaugural Release of OS Image Composer](#). | [More edge AI blog posts on Medium](#).
